

iSAGE Training  
3-4 December 2019 – Wetherby, UK

# Assessing consumer needs and developing new products

Emilia Cubero Dudinskaya  
Raffaele Zanolì

Università Politecnica delle Marche (UNIVPM)

# How do we know what a customer needs?

## Marketing Research!

# Marketing research process

Step 1: Formulating the problem

Step 2: Developing an Approach to the Problem

Step 3: Formulating a Research Design

Step 4: Data Collection (Field Work)

Step 5: Analyzing Data

Step 6: Reporting the Research

# Marketing research process

## Step 1: Formulating the problem

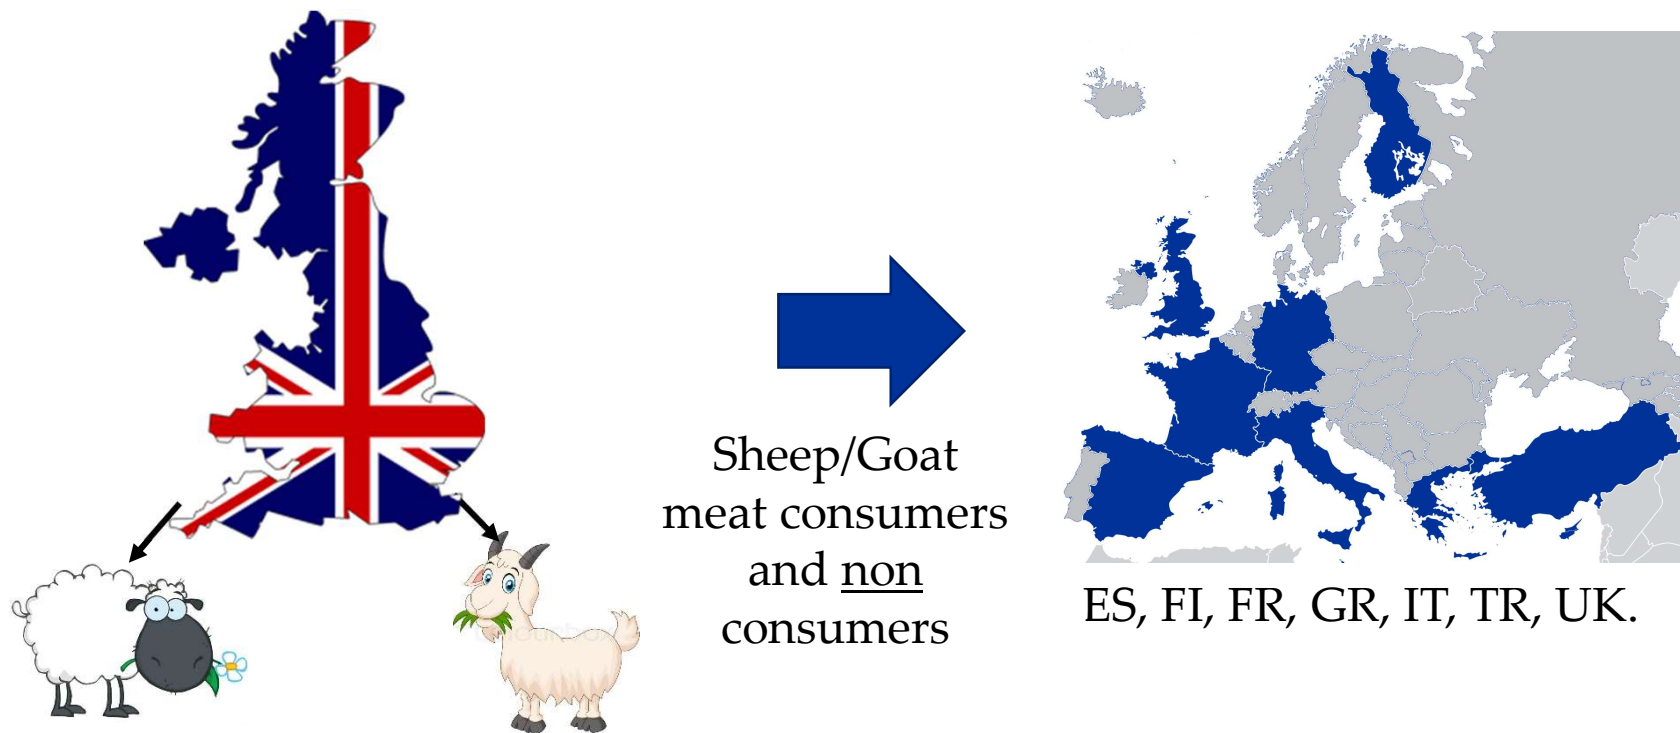

# Formulating a research problem in cross-cultural settings

- Comparability → similarities and differences
  - Define the marketing research problem in terms of domestic and foreign environmental and cultural factors. Then, compare.
- Equivalence
  - The problem must have the same meaning and role across cultures.
  - Must be measured using the same methods and measures.

# Example of formulating the problem in cross cultural research

**Management problem:** Should we change the advertising message, the product label?

# Example of formulating the problem in cross cultural research

## Comparability:

- Familiar with Lamb consumption → special occasion (Christmas, Easter).
- Different levels of interest in health

## Equivalence:

- Popular cuts vary between countries
- Preference → local, except Finland

=> Consumer preferences → What are consumer preferences and barriers regarding their consumption of lamb meat?

# Marketing research process

Step 1: Formulating the problem

Step 2: Developing an Approach to the Problem

# Step 2: Developing an Approach to the Problem

- Marketing research → cognitive approach
- Two main views:
  - Etic → Universal view
    - Investigating many cultures, an absolute or universal criteria applies.
  - Emic → Culturally specific
    - Examines the phenomenon from within the system (only one culture).

# Marketing research process

Step 1: Formulating the problem

Step 2: Developing an Approach to the Problem

Step 3: Formulating a Research Design

# Step 3: Formulating a Research Design

- A **research design** is a framework or blueprint for conducting the marketing research project.
- Affected by the nature of the research problem
  - Quantitative: What?
  - Qualitative: How? Why?
  - Mixed: Enhance the scope and comprehensiveness.

# Qualitative vs. quantitative research

	Qualitative Research	Quantitative Research
Objective	To gain a deeper understanding, contextualize a phenomenon, the why and how of things	To quantify the data and generalize the results from the sample to the population
Process	Inductive, subjective, recurrent	Deductive, objective, sequential
Sample	Small number of <u>non-representative</u> cases	Large number of <u>representative</u> cases
Data Analysis	Non-statistical	Statistical
Outcome	Develop an initial understanding, theory development	Recommend a course of action
Examples	In-depth interviews, focus groups case studies	Surveys, Experiments

# Marketing research process

Step 1: Formulating the problem

Step 2: Developing an Approach to the Problem

Step 3: Formulating a Research Design

Step 4: Data Collection (Field Work)

# Qualitative research

# What we did?

Literature review: 143 papers on lamb/sheep consumption

Results:

- Gender differences
- Different consumer groups by use, taste
- Origin, cut, nutritional information → really important

## Qualitative research

### Focus groups

- 7 countries, regular & occasional consumers
- Responsible for food purchasing
- Between 25-65 years old

### In-depth interviews (laddering)

- 7 countries, including non-consumers
- Responsible for food purchasing
- Between 25-65 years old

## Qualitative results

# Qualitative research: Laddering and means-end chain analysis

Interviewing technique that attempts to understand and uncover the link between product attributes, personal outcomes (benefits), and values → It is achieved by repeating the following question:

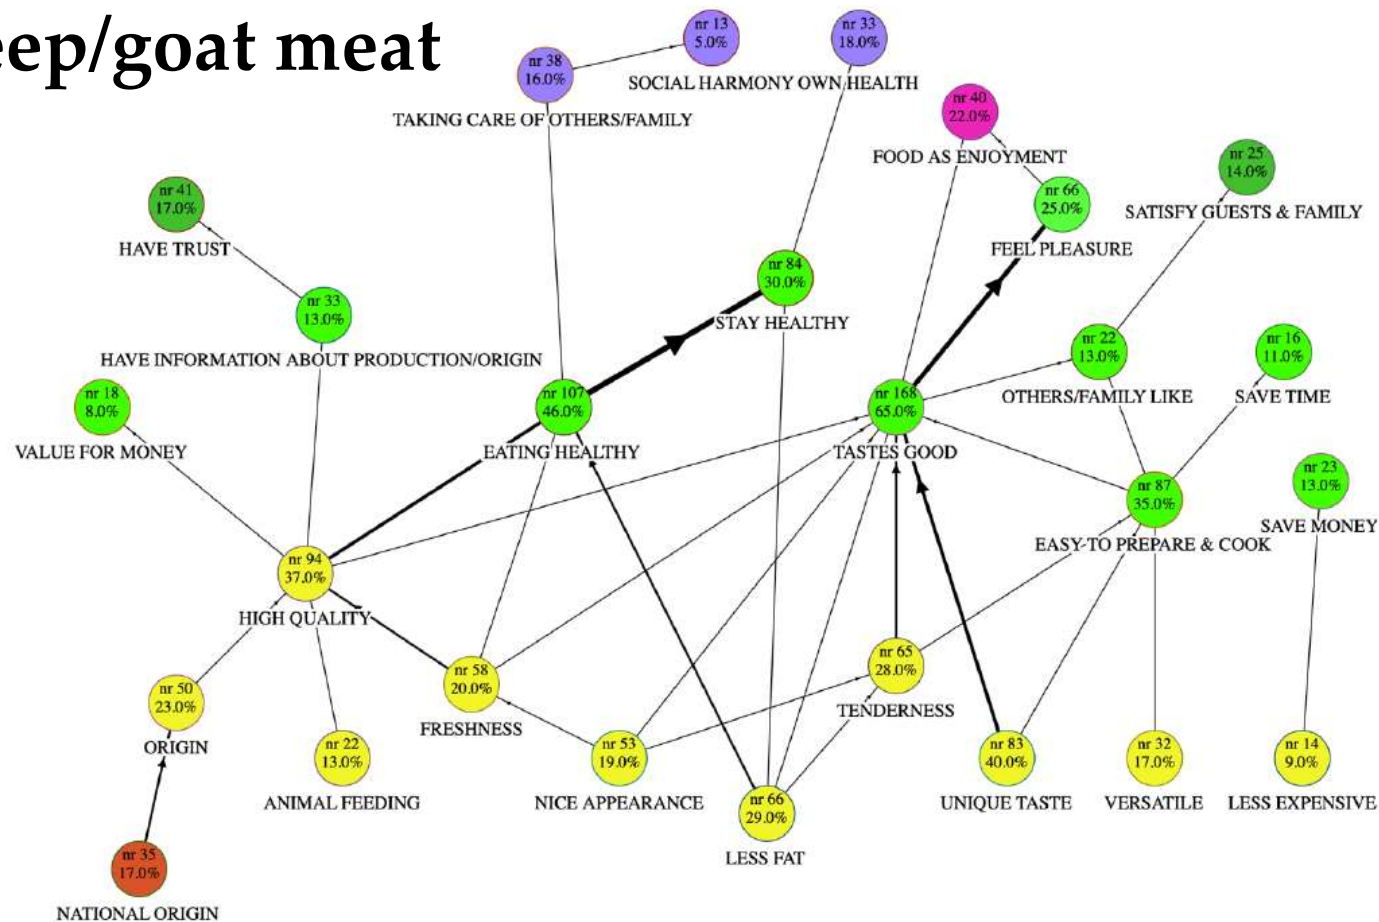

*Why is this important for you?*

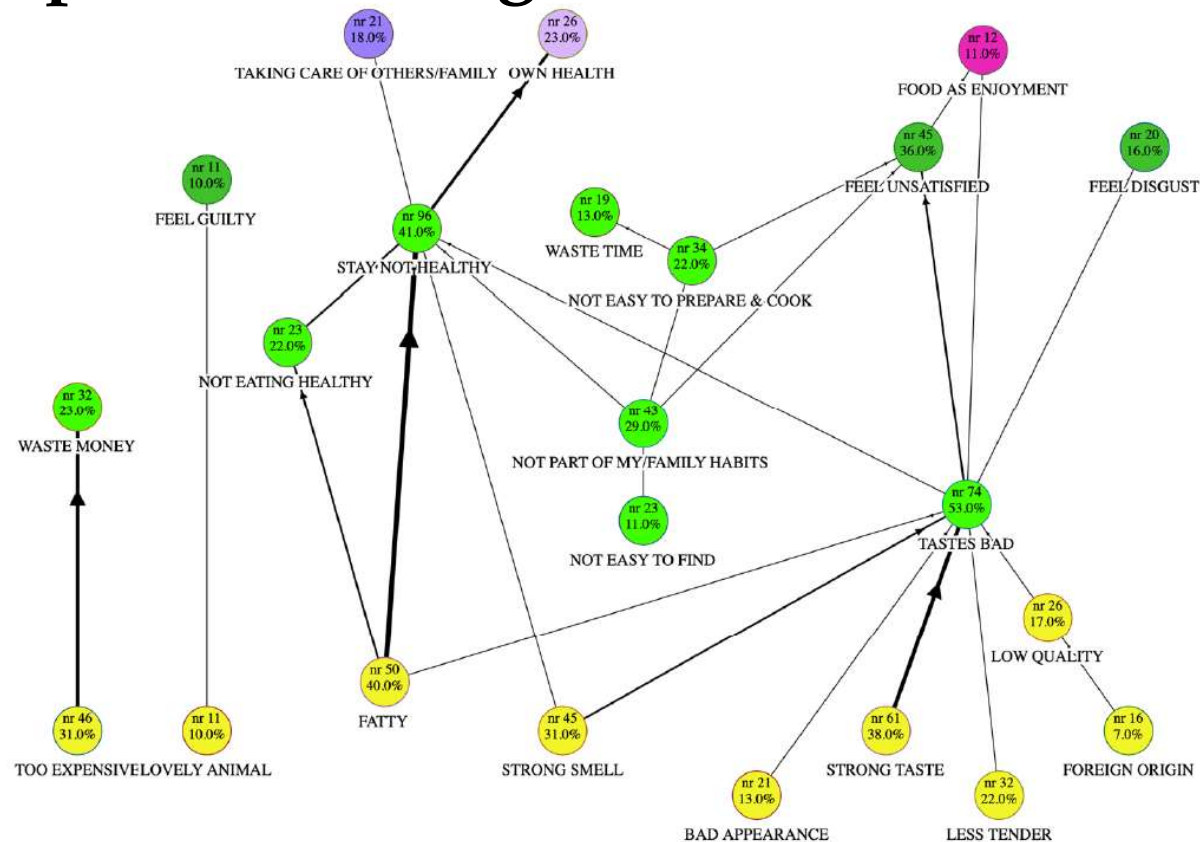

# Qualitative results

## Cognitive structure of motivations to purchase sheep/goat meat

# Qualitative results

## Cognitive structure of barriers linked to the consumption of ewe/goat meat

# Qualitative research: focus groups

- Pre-screened, homogeneous group (per country)
- Requires a moderator, assistant, video/voice recorder, comfortable place and refreshments
- Participants are encouraged to talk openly about their opinions and respond to other members
- Audiovisual assistance might be used
- Everybody gets a chance to talk
- Focus on a specific topic

# Qualitative results: focus groups

*"I prefer 'arrosticini' when I'm with my friends, but for me and my family I usually cook the lamb in the oven"*

Situation

Safety

*"Meat from young animals is purer and has less hormones, so I trust to consume more of it"*

*"I would never consider buying sheep/goat meat from a supermarket or from a butcher whom I don't know personally"*

Purchasing place

*"I must admit I don't cook much, just easy things, so regarding lamb, I usually buy chops that are very easy to cook"*

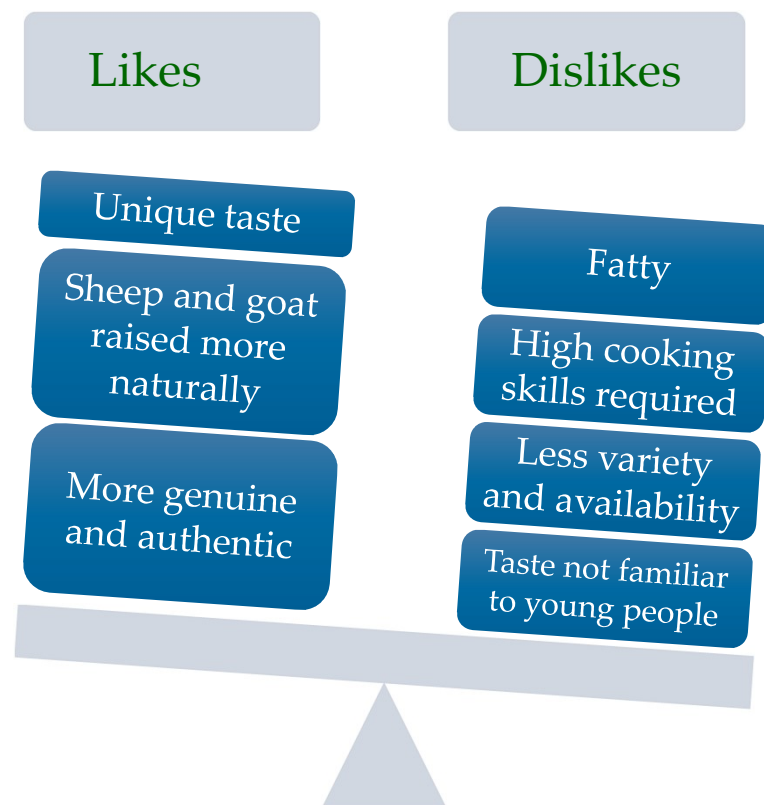

Convenience

*"I reduced the purchase of meat in general...I usually purchase beef meat because it is less fatty but I know that lamb meat is better in terms of genuineness"*

Health

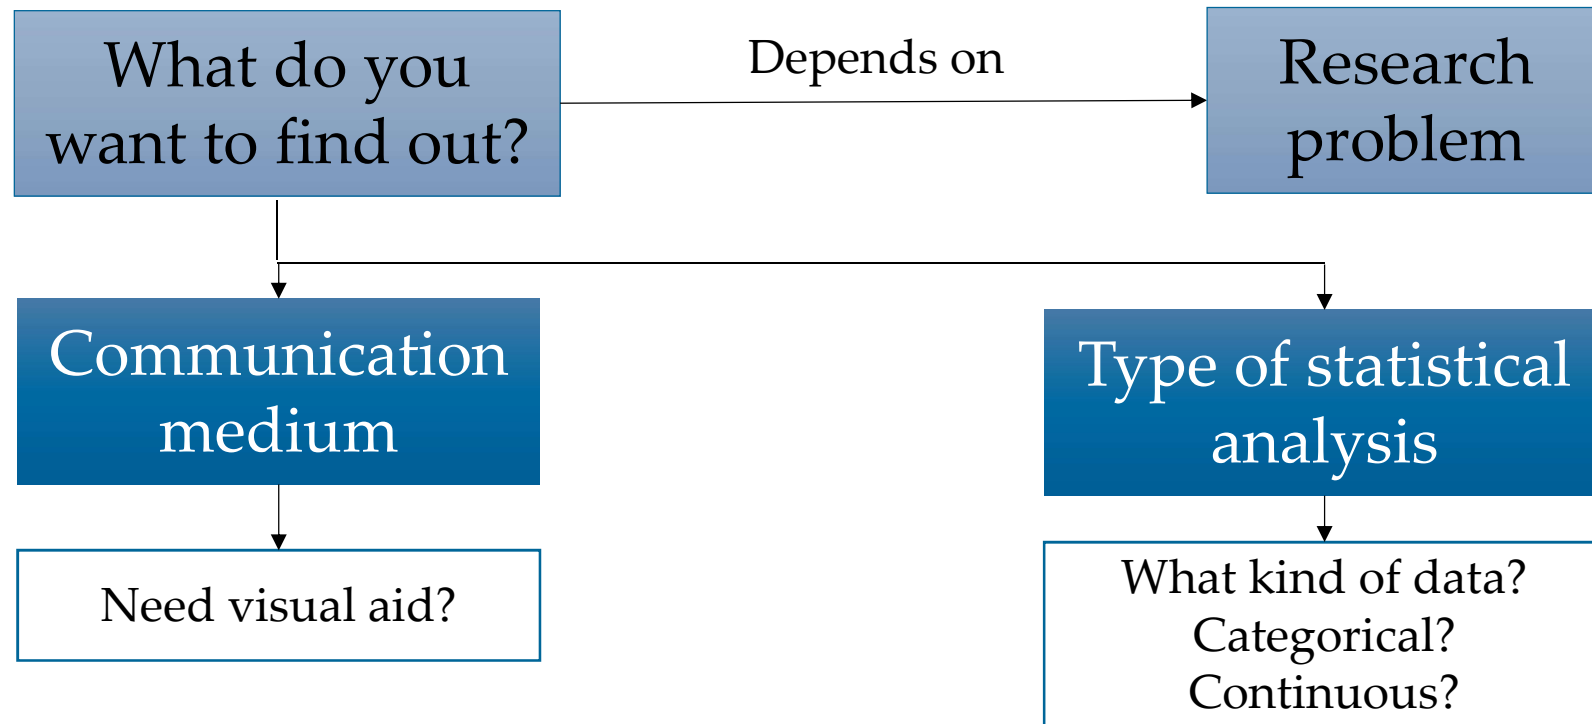

# Results summary- MEAT

# Quantitative research

# Quantitative research: developing a questionnaire

**Remember:** ask only relevant questions that will provide accurate information

# Steps to develop a good cross-cultural questionnaire

- Check previous studies and literature
- Decide on the order and wording of questions and the layout of the questionnaire
  - Use specific questions related to the concept of interest
  - Keep it simple → avoid “and”, “/”, “or”, double negations
  - Avoid bias questions → desirability, leading
- Work with an international team (advisable)
  - Translate and back-translate
- Select the sample
- Pilot test for omissions and ambiguity
  - Correct the problems and pretest again, if necessary

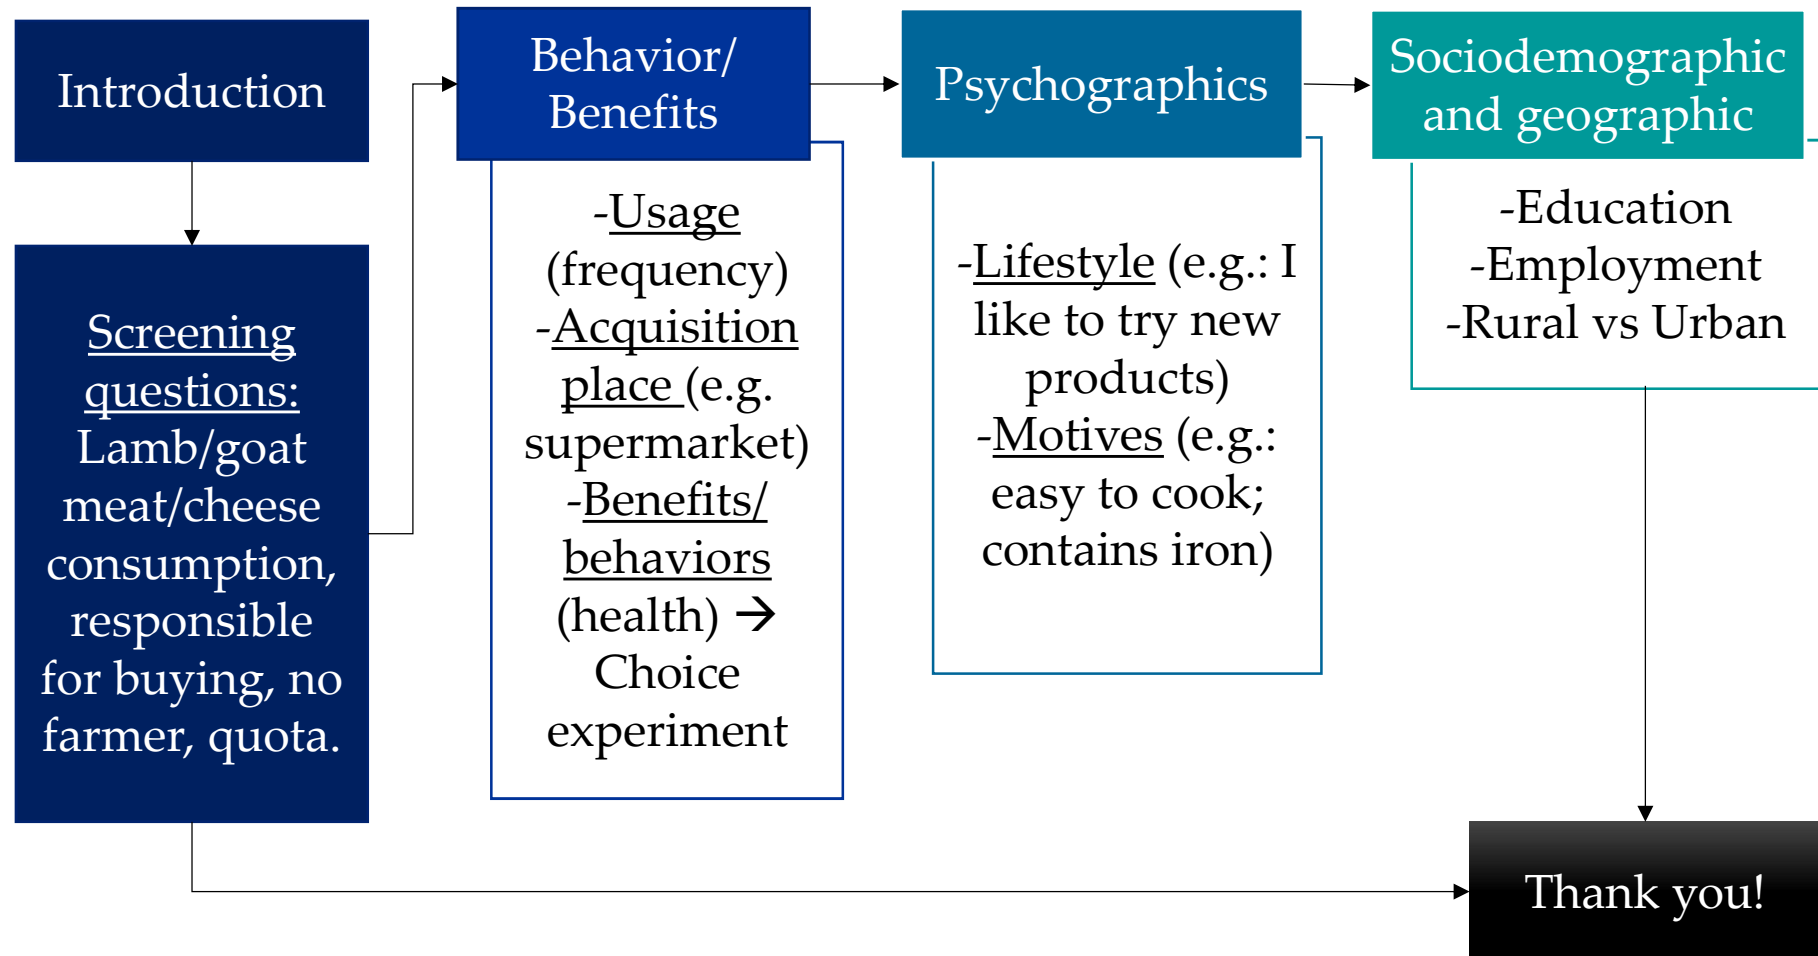

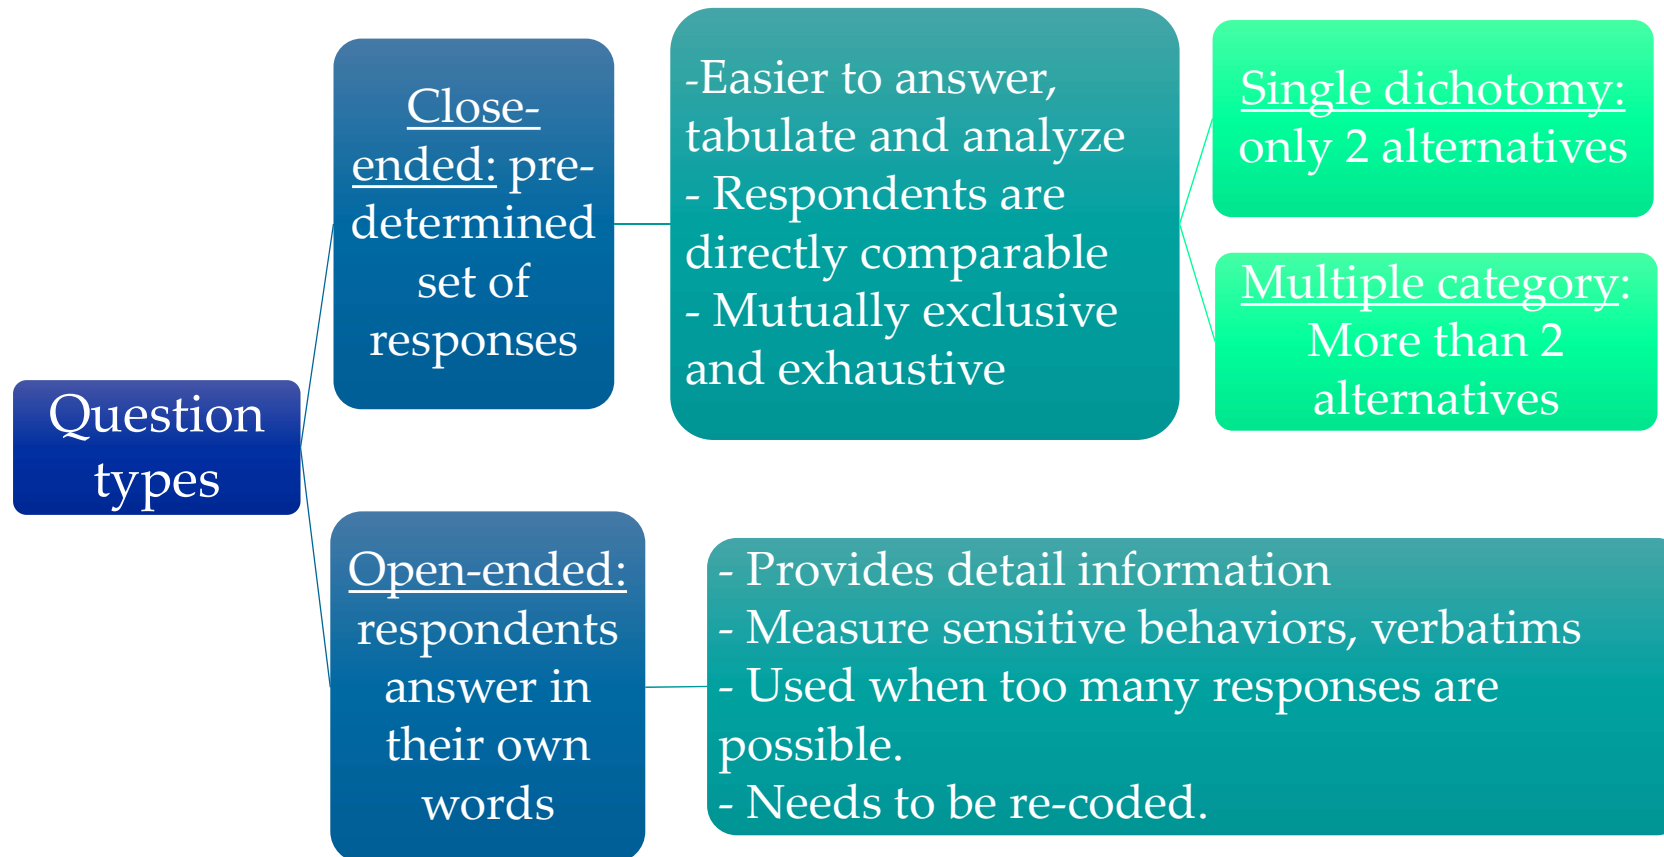

# Literature review (99 papers)

- Most meat choice experiments have been done in Spain and United States
- Studies tend to focus on beef, only a few specialize on Lamb meat
  - Most studied attributes: Price, origin, animal welfare (not one unique label), fat content, Organic.
  - Results show that **cooking method, origin, safety, fat content, animal welfare and color** are the most important attributes for consumers.

# Questionnaire structure

# Question formats

# Examples

- Open questions

Will you please describe your thoughts about a person who shoplifts items from a grocery store to keep from going hungry?

---

- Dichotomous Questions

Have you ever eaten lamb meat?

☐ Yes

☐ No

- Multiple choice

Which of the following lamb cuts is your preferred one?

☐ Lamb chops    ☐ Lamb cutlets    ☐ Lamb leg    ☐ Other: \_\_\_\_\_

# Liker scales

- Frequency

How frequently do you eat lamb meat in restaurants?

☐ Never    ☐ Seldom    ☐ Sometimes    ☐ Often    ☐ Almost always

- Agreement

I choose products for their taste rather than for their nutritional value

☐ Strongly disagree    ☐ Disagree    ☐ Neither agree nor disagree    ☐ Agree    ☐ Strongly agree

- Bi-polar scales

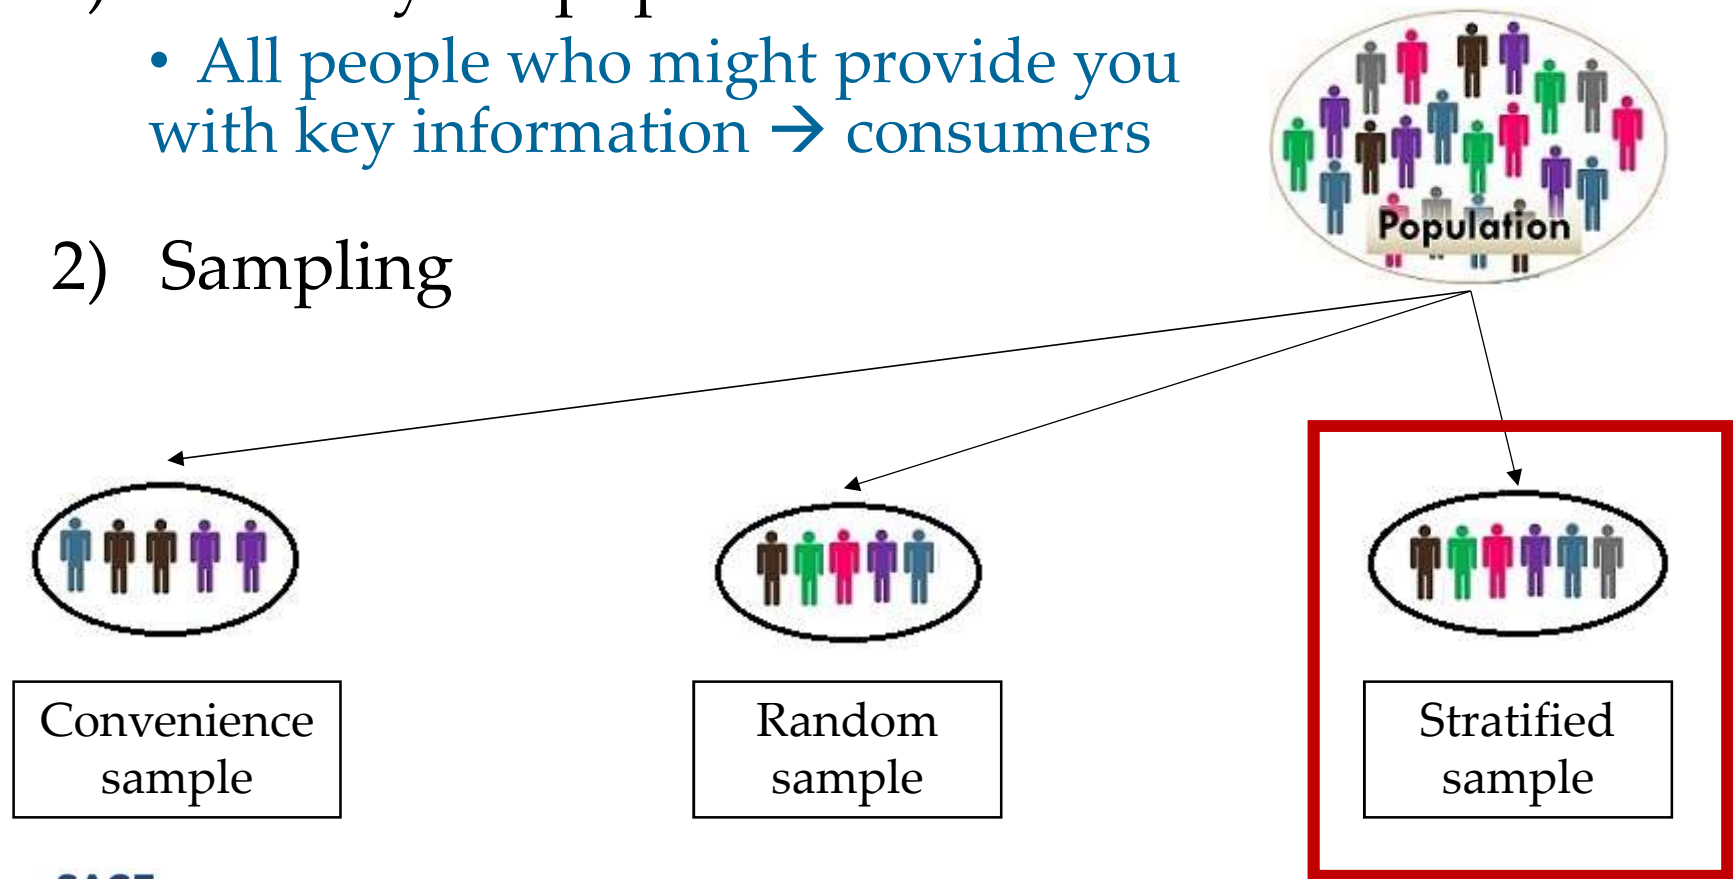

Familiar product   ☐   ☐   ☐   ☐   ☐   ☐   ☐   New product

# Who do you want to interview?

1) Who is your population?

- All people who might provide you with key information → consumers

2) Sampling

# Our stratified sample

- Based on Eurostat 2016/2017
- 7 countries
  - Finland, France, Greece, Italy, Spain, Turkey and UK
- Gender/occupation
  - Female, Male
  - Employeed, Unemployed, Retired/Student (inactive population)
- Age
  - 18-24, 25-34, 35-44, 45-54, 55-64 years old

# Additional filters

- Responsible or partially responsible for household grocery shopping
- Not related to the food industry
- Specific filters:
  - For meat → Lamb/goat meat consumers

# Choice experiment

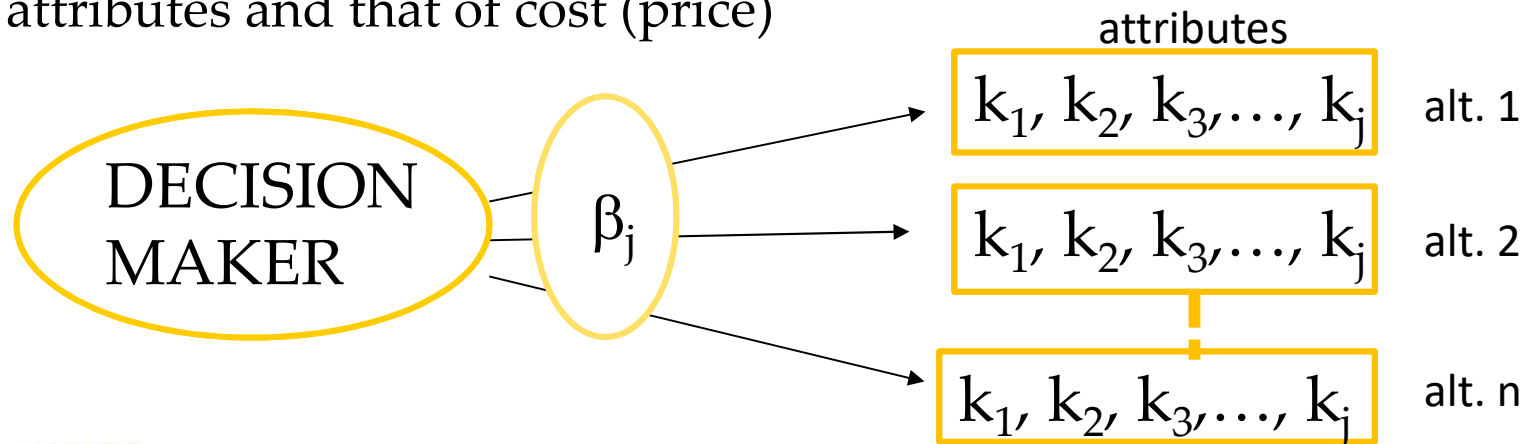

iSAGE Training  
3-4 December 2019 – Wetherby, UK

UNIVERSITA  
POLITECNICA  
DELLE MARCHE

# Discrete Choice method

- Based on Lancaster's theory of demand →  
*"The total utility gained from a product is the sum of the individual utilities provided by the attributes of that good" (Lancaster, 1966).*
- Respondents (Decision makers) are asked to choose their favorite alternative among several hypothetical alternatives (characterized from a certain numbers of attributes  $k_j$ ) in a sequence of experimentally designed choice tasks.
- The **Purpose** is to obtain estimates of the taste parameter vector  $\beta_j$  which contains marginal utilities of attributes.
- **Willingess-to-pay** is measured by the ration of the marginal utility of attributes and that of cost (price)

# Methods: choice experiment structure - MEAT

- 4 types of labels tested
  - Halal, Organic, Carbon footprint, PGI/PDO
- Choice experiment
  - 12 choice sets, 9 attributes
  - Labeled: 4 alternatives
    - Lamb leg, lamb chops, goat chops, Beef T-bone
  - A no-choice alternative

# Choice experiment attributes

Price  
(+/- average)

Origin  
(National, EU, out EU)

Presence or not of:

**HIGH PROTEIN CONTENT**

Fat

Ready to cook

# Choice experiment design for meat

# Choice experiment attributes

# Labels per country

Labels/ Country	Spain	Finland	France	Greece	Italy	UK	Turkey
Halal							
PDO/PGI		-					-
Organic							
Carbon footprint							

# Choice experiment instructions

Imagine that it is a regular weekday and you decided that you want to eat a dish based on some sort of meat for the next meal with your family. You go to the usual place in which you buy meat and the following alternatives are presented to you. If you want to see the image in more detail, you can zoom on it by clicking on top of it.

Please click "BUY" on the image with the meat that you would like to buy the most. Then write below how many **trays of 500gr** you would like to buy. If you think you would not buy any of the options, then you can select the option "None".

If you need to refresh the meaning of the labels [click here](#)

# Choice experiment for meat

The choice set displays four meat products, each with a label showing its name, origin, price, and a 'BUY' button. A hand cursor points to the Goat Chops option.

Product	Origin	Price (£)	Price (£/kg)
LAMB LEG	New Zealand	£ 4.28	£ 8.56/kg
GOAT CHOPS	UK	£ 7.80	£ 15.60/kg
LAMB CHOPS	UK	£ 8.39	£ 16.78/kg
BEEF T-BONE	EU	£ 8.32	£ 16.64/kg

**Choice set**

# Choice experiment for meat

# Data collection for the meat survey

- Data collected from Mid-March to mid-May, 2019

Country	Respondents by May 14 <sup>th</sup> , 2019	Valid responses
Finland	417	413
France	416	414
Greece	403	400
Italy	419	417
Spain	420	417
Turkey	405	391
UK	420	414

# Marketing research process

Step 1: Formulating the problem

Step 2: Developing an Approach to the Problem

Step 3: Formulating a Research Design

Step 4: Data Collection (Field Work)

Step 5: Analyzing Data

# Step 5: Analyzing Data

- Coding, data entry and consistency checks
  - Check control questions, time spent, answering patterns.
  - Check for typos when coding data
  - Check for “strange” outliers
- Descriptive and inferential statistics

# Results on sheep and goat meat

# WTP PGI/PDO

# WTP Halal

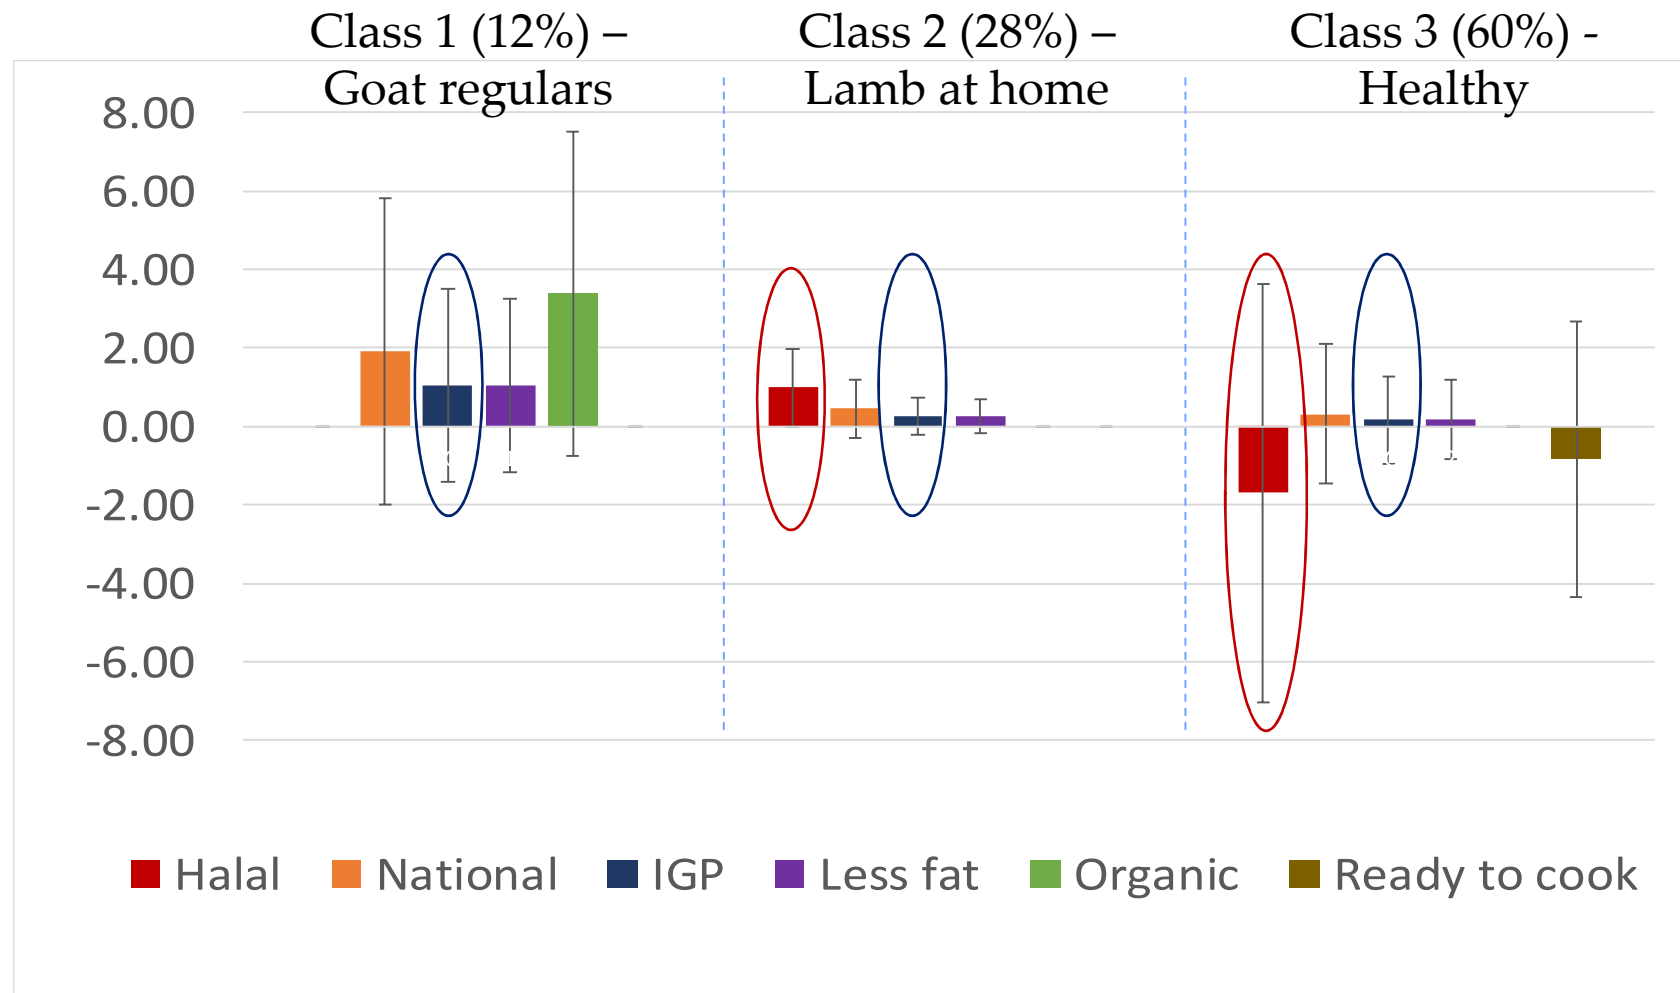

# Market Segmentation

The process of dividing a market of potential customers into homogeneous sub-groups based on different characteristics.

1. Latent class choice experiment  
→ most important attributes and willingness to pay (WTP)
2. Regress the class probability by sociodemographic, behavioral, knowledge and psychographic variables

# WTP – UK (Latent class)

# Marketing research process

Step 1: Formulating the problem

Step 2: Developing an Approach to the Problem

Step 3: Formulating a Research Design

Step 4: Data Collection (Field Work)

Step 5: Analyzing Data

Step 6: Reporting the Research
